PROJECTS

Youtube Summarizer. Developed a Python-based application that automatically generates concise summaries of YouTube videos, enabling users to quickly grasp the key points and save time.

Technologies: Python, Natural Language Toolkit (NLTK), YouTube Data API, Streamlit (for UI).

Fitness Management System. Developed a comprehensive Fitness Management System using C, JavaScript, SQL, Python, HTML, and CSS, providing a user-friendly web interface for managing gym memberships, scheduling classes, tracking fitness goals, and generating analytical reports.

Implemented features such as member registration, class booking, personal trainer assignment, diet plan management, and progress tracking, leveraging SQL databases for efficient data storage and retrieval.

This project allowed me to apply and strengthen my skills in natural language processing, data analysis, and building end-to-end applications using Python
